

AMENDMENT AND PRESENTATION OF CLAIMS

Please replace all prior claims in the present application with the following claims, in which claim 1 is currently amended.

1. (Currently Amended) A seat hammock that mounts on a body of a baby carriage to form a seat, comprising:

a seat portion;

a backrest portion;~~and~~

a pair of side projection portions projecting respectively from side edges of an upper region of the backrest portion, said side projection portions being adapted to connect to the baby carriage; and

a body cover extending from both side edges of said seat portion and both side edges of said backrest portion toward the center, and covering said seat portion and said backrest portion, wherein the body cover includes a plurality of slits for passing, respectively, a crotch belt and a waist belt of the baby carriage.

2. (Previously Presented) The seat hammock according to claim 1, wherein said backrest portion includes a pair of side walls rising from both side edges thereof, and said body cover extends from the upper ends of said pair of side walls toward the center.

3. (Previously Presented) The seat hammock according to claim 2, wherein said body cover extends along the pair of side walls and a backrest surface of said backrest portion.

4. (Previously Presented) The seat hammock according to claim 1, wherein a front edge of said body cover and a front edge of said seat portion are releasably connected.

5. (Previously Presented) The seat hammock according to claim 1, wherein said body cover is detachably connected to said seat portion and said backrest portion.

6. (Previously Presented) The seat hammock according to claim 5, wherein both side edges of said body cover are detachably connected to both side edges of said seat portion and said backrest portion.

7. (Previously Presented) The seat hammock according to claim 1, wherein an upper edge of said body cover includes a neck portion cut in a horseshoe shape, and upper end connecting portions extending both sideways from upper ends of the neck portion and connected to an upper edge of said backrest portion.

8. (Previously Presented) The seat hammock according to claim 1, wherein said body cover has a cut portion cut in downward from an upper edge thereof, and parts separated on either side by said cut portion are detachably connected.

9. (Previously Presented) The seat hammock according to claim 8, wherein said body cover includes a slide fastener extending downward from the center of the upper edge thereof.

10. (Previously Presented) The seat hammock according to claim 1, wherein said body cover has a neck portion cut from the upper edges thereof in a horseshoe shape, and a periphery

of said body cover except for said neck portion is detachably connected to said seat portion and said backrest portion.

11. (Canceled)

12. (Canceled)

13. (Previously Presented) The seat hammock according to claim 1, wherein said body cover has a cut portion cut from the upper edges thereof to the slit for the crotch belt, and parts separated on either side by said cut portion are detachably connected.

14. (Previously Presented) The seat hammock according to claim 1, wherein a plurality of side projection portions projects from said side edges of said backrest portion for attaching to the baby carriage.

15. (Previously Presented) The seat hammock according to claim 14, wherein the plurality of side projection portions are located about the upper ends of said backrest portion.
